CRAY CX1000

Cray is proud to announce the Cray CX1000 system – a dense, power efficient and supremely powerful rack-mounted supercomputer that allows you to leverage the latest Intel® Xeon® processors for:

- Scale-out cluster computing using dual-socket Intel Xeon 5600s ([Cray CX1000-C](#))
- Scale-through (GPU) computing leveraging NVIDIA Tesla® ([Cray CX1000-G](#))
- Scale-up computing with SMP nodes built on Intel's QuickPath Interconnect (QPI) technology offering "fat memory" nodes ([Cray CX1000-S](#))

High(brid) Performance Computing – The Cray CX1000 redefines HPC by delivering hybrid capabilities through a choice of chassis, each delivering one of the most important architectures of the next decade.
